Kia ora,

This leaflet is to let you know about a change we are proposing to make in your neighbourhood.

Proposal:

Reference	TR27-24 William Street, Hataitai – P120, EV Charging only
Location – where we propose to make the change	Outside No.3 William Street, Hataitai
What we'd like to do	• Install two EV chargers, road markings and signage • Reorientate the 60° angled parking spaces to 90° parking spaces • Apply the following parking restrictions: P120, EV Charging only
Why we are proposing the change	Wellingtonians have asked the Council for action on climate change, housing, and better transport options, so Wellington City Council is getting on with it. As part of Te Atakura – First to Zero, our climate change action plan, one of the goals is to reduce the city's emissions to net zero by 2050. Around 50% of the city's carbon emissions come from transport. To help reduce emissions, the Council is making important changes to our transport system to give people better ways of moving around the city so we can all enjoy more vibrant, liveable streets. We are changing some parking spaces for electric vehicle (EV) charging, in line with our Parking Policy 2020. Installing EV chargers on local streets and at places like our pools, libraries, and recreation centres helps to encourage people to switch from their petrol or diesel vehicles to an EV. We're also making things safer and easier for pedestrians, people riding bikes or scooters, people taking the bus or using car share so more of us can be less reliant on our cars. Switching to an EV can be one of the biggest ways for individuals to reduce their emissions. Electric vehicles are a growing presence in our city. Between January and September 2023, 16% of new vehicle registrations in New Zealand were battery-electric vehicles. The Land Transport (Clean Vehicles) Amendment Act 2022 sets incremental emissions reduction targets over the next five years. These targets will increase the number of electric vehicles in the market and thereby the demand for charging facilities. In response to this increased demand, the Council is installing 60 fast (25kW DC) chargers at 30 locations. These chargers take between 40-70 minutes to charge a vehicle and are therefore best located in places where people can do other things while they wait. Hataitai currently has no publicly accessible electric vehicle chargers. The proposed installation near the shopping area would enable residents and

	visitors to recharge their vehicles as they visit nearby community facilities, shops, and cafes. The selection of this site was based on its proximity to the shopping area, the space required to install the chargers in line with good design practice, and the ability to connect them to the electricity grid within a reasonable budget. The change to P120, EV charging only is consistent with our parking enforcement abilities and other Council-controlled parking settings for EV charging-equipped parking spaces. It ensures that the parking spaces are used for their intended purpose with a turnover rate that enables a range of users to utilise the chargers. The change from 60-degree to 90 degree parking angle is required for users to drive in or reverse into the parking spaces. This is required so that users can access the charging port, which can be on either side, front or back, of the vehicle.
Impact	**Strategic drivers** • Installation of a network of chargers addresses the real/perceived barrier of a lack of EV charging infrastructure. This will enable more people to switch to lower-carbon passenger vehicles. • Supporting EV vehicles is a strong indicator from the Council of low-carbon transport. **Net parking impact** • Minor reduction of parking available for vehicles that do not need to be charged. **Pedestrian impact** • Minimal impact. The footpath will meet all relevant width standards.
How this relates to the parking policy	• **Support move to becoming an eco-city** – facilitate the uptake of car sharing, electric vehicles and other transport with low carbon emissions. Manage parking and incentivise a decrease in vehicle use to contribute to a reduction in carbon emissions, better water quality, air quality, stormwater management and biodiversity outcomes. • **Support shift in type of transport used** – facilitate a shift to using active transport (walking and cycling) and public transport through parking management and pricing, to move more people with fewer vehicles. • **Support city place-making, amenity and safety** – ensure on-street parking design and placement supports overall city amenity, safety, community building, heritage, creative arts, good urban design outcomes and attractive streetscapes.
Additional Information	• **Average daily traffic count** – 430 • **Annual parking revenue impact** – No impact on parking revenue • To view the legal description for this Traffic Resolution, an electronic copy of the report will be available on the Council's website from 9am, Tuesday 13 February at https://www.letstalk.wellington.govt.nz/ or you can call (04) 499 4444 and we will send one out to you.
